Education

UNIVERSITY OF BRITISH COLUMBIA

Bachelor of Applied Science - Computer Engineering Co-op
Co-op: Available as soon as possible

Vancouver, British Columbia
Expected Graduation: May 2028

Awards: AP Scholar Award (2023) - Earned for completing three Advanced Placement courses in good standing.

Technical Skills & Projects

Languages: C, C++, Python, Java, TypeScript, HTML, SystemVerilog, RISC-V, ARM Assembly

Embedded Systems: Next.js, React, Arduino, FPGA, STM32, UART

Tools: Unity, Git, VS Code, Quartus Prime, Linux

AI Hub: Personal Project

February 2026 – May 2026

Architected a full-stack web application using Next.js and Tailwind CSS to automate content broadcasting. Integrated AI-driven features to streamline media production and user interaction.

UBC Finds: Course Project

September 2025 - December 2025

Collaborated on a full-stack interactive map application using Java and TypeScript to streamline campus navigation. Implemented asynchronous data fetching and state management to ensure real-time updates of location markers and user search results.

Cryptocurrency Python Web Scraping: Personal Project

October 2024 - January 2025

Developed Python scripts using Requests and BeautifulSoup to scrape and parse real-time cryptocurrency market data from multiple online sources. Processed and analyzed extracted datasets to identify price trends, generate visual reports, and support data-driven decision-making for trading strategies.

Relevant Experience

National Research Council Canada (NRC)

St. John's, Newfoundland and Labrador

Data Analyst Student

September 2026 - PRESENT

Quantified the effects of hull and propeller cleaning on ship powering through data modeling and statistical analysis. Developed Python scripts to analyze hydrodynamic datasets, evaluated hull surface roughness trends, and authored comprehensive technical reports for internal OCRE research teams.

Code Ninjas

Surrey, British Columbia

Lead Coding Instructor

June 2026 - PRESENT

Spearheaded advanced algorithmic curriculum development, orchestrating high-impact educational programming initiatives that revolutionized student engagement. Engineered complex software solutions, hyper-accelerating technical proficiency across diverse development frameworks while managing high-stakes troubleshooting operations to optimize system stability and pedagogical delivery.

UBC AgroBot

Vancouver, British Columbia

Firmware Engineer

January 2026 - August 2026

Develop robust power management firmware on STM32 platforms, focusing on real-time data monitoring and system health logic. Engineer efficient power-switching logic and charging protocols that maximize energy transfer between subsystems for extended field operation.

Leadership

Hot Potato Initiative

Surrey, British Columbia

President

September 2022 - June 2024

Raised funds and organized community events to support homelessness initiatives.
